### **INSTALLER and RPM:**

- 1. The GCC 4.8.4.201902-GNURX Installer onwards supports the 'Custom Installation' and 'Default Installation' modes. The 'Default Installation' mode is set by default where the tools are installed into the default location at "C:\Program Files\GCC 4.8.4.201902-GNURX" and the user's username and activation key are silently accepted if cached in the registry.
- 2. The GNURX ABI (Application Binary Interface) is made available on our GNU Tools support website (https://gcc-renesas.com) and also provided along with Linux RPM and Windows installer.

### Notes:

This installer does not provide an option to integrate the GNURX toolchain with e2 studio, as the e2 studio IDE will automatically detect the GNURX toolchain installation on start-up for integration. Alternatively, you may use the 'Toolchain Management' feature in e2 studio to achieve this.

For details on e2 studio please visit the following link below: http://www.renesas.com/products/tools/ide/ide e2studio/index.jsp

There is no support in this installer to integrate toolchain with the HEW IDE.

# KNOWN ISSUES IN GCC 4.8.4.201902-GNURX

This section describes all known issues for this particular release:

1. In certain cases the program will time out while executing with following options:

Note: Both flags need to be accompanied by "-fno-diagnostics-show-caret -w -O1 -DSTACK\_SIZE=4096 -msim -lm" for the problem to be observed.

- a) -funroll-loops b) -fpeel-loops
- 2. An incomplete type error can be observed ocasionally when using the -fpack-struct option in C++. The combination of the flags that reproduce this problem is "-fpack-struct -fno-diagnostics-show-caret -nostdinc++ -fmessagelength=0 -std=c++11 -pedantic-errors -Wno-long-long -S -msim"
